## Extension Description

The Admin Category filter extension allows you to filter products of particular category in Magento admin from the Catalog -> Manage Products Grid. This makes it easy to find products in a specific category and do bulk updates to these products. The extension also has a feature that allows you to do a Mass Action Update. So for example you can use this to filter by a website and a specific category of that website. Then do a select all products on this group of data and then say add to category and select any category to then add these products too. This was extremely useful in a multi store setup where you have a category and products in this category on store A and you want to make the same category on store B and assign the same products to this new category. Without this extension that task is actually quite hard.

## Extension Installation

1. Log out from Magento Admin panel if you are logged in
2. Unpack the contents of the zip file purchased and VIA ftp and upload the app folder to your magento install root.
3. Log into Magento Admin Panel
4. If Cache Control is enabled in Magento go to 'System > Cache Management' section, select 'Refresh' under 'All Cache' drop-down menu and press 'Save Cache Settings'
5. Now go to Catalog -> Manage Products and you will see your new filter

## Extension Usage

Once the extension is properly installed you will see the option in the grid automatically. See example below

**Easily Filter Products in the Catalog by Categories**

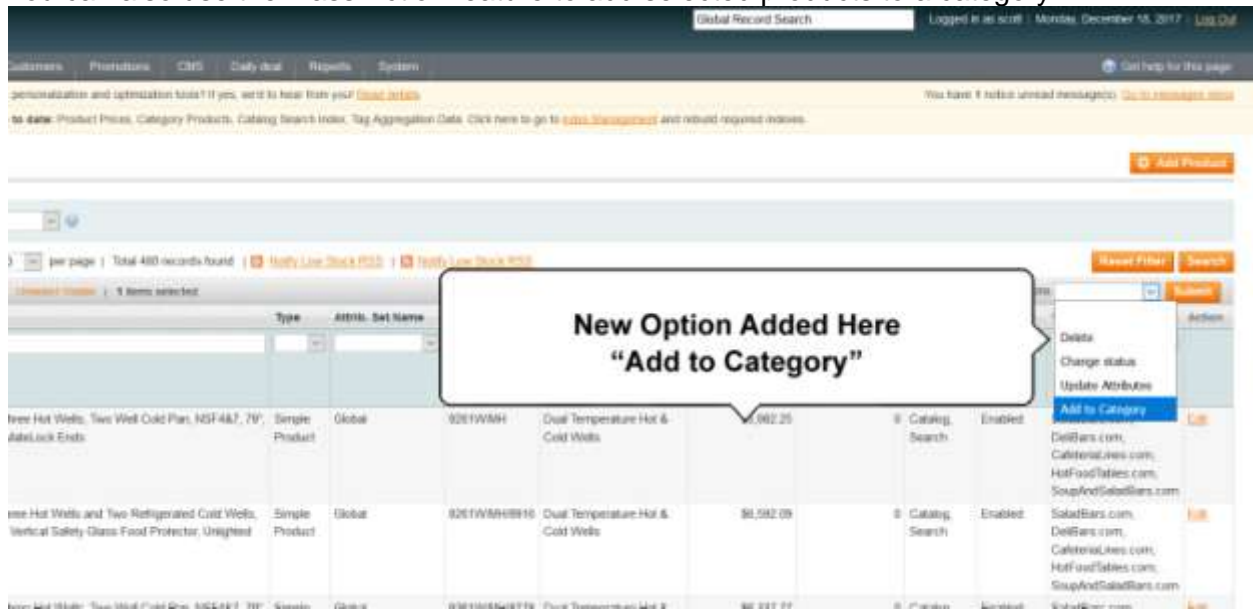

ID	Name	Type	Attr. Set Name	SKU	Categories	Price	Visibility	Status	Website	Action	Qty
